

Here at Securafit we have our own workshop where we can custom build any set of steel railings required for the job at hand. The design could be ornate, modern or anything else dreamt of. We can also match any existing railing and gates on site.

All railings are subject to the same Galvanising and Powder coating process as our Gates.

Posts & Fixings

The posts that Securafit offers are custom made to each site. Bespoke posts are identified and named so they can be installed in and around existing obstacles. E.g. a brick wall. Securafit uses vandal resistant security fixings this post and clip system provides a reasonable level of security to any boundary.

Finish

Railings and posts have been submitted to number of precoat processes, are galvanised to BS EN ISO 1461 and can polyester power coated to BS EN ISO 13438. all fixings are fully galvanised.
